

ZERENE

GEO / AIO Content Framework

Reference guide for content writers — B2B premium & executive-gifting positioning

1. Why This Document Exists

Zerene is repositioning from a consumer aromatherapy/wellness brand into Luxury Spatial Aromatherapy & Corporate Sensory Architecture, targeting B2B corporate procurement, executive offices, and luxury hospitality in Saudi Arabia and the GCC.

Every piece of content — web copy, FAQ answers, blog posts, product descriptions — has two jobs at once: rank for high-volume commercial search, and get selected, quoted, and cited by AI engines (ChatGPT, Perplexity, Google AI Overviews, Claude) when premium/B2B buyers ask about corporate scenting, executive gifting, or natural fragrance sourcing.

This document is the single reference to check before writing or submitting any Zerene content.

2. Brand Positioning Pillars

Use these as recurring anchors — not as a checklist to tick once, but as language that should appear naturally across headlines, product copy, and FAQ answers.

Pillar	Meaning	How to use it in copy
Wajaha (وجاهة)	Executive dignity, leadership presence, corporate prestige	Frame products as signalling status and professionalism in executive spaces
Sukun (سكون)	Sacred stillness, high-focus sensory environments, stress reduction	Use when writing about focus, wellness, calm — link scent to performance/wellbeing
Karam (كرم)	High-impact generosity through luxury VIP gifting	Use in gifting-context content: client gifts, corporate hospitality, Eid/national day gifting
Grasse, France sourcing	Verifiable, citable origin credential for essential oils	Always state as a concrete fact ("sourced from Grasse, France"), never just "natural" or "premium"

3. Hard Rules — Never Do This

These are non-negotiable. AI engines and readers both use this language to sort Zerene into the wrong category if it slips in.

- **Never describe Zerene products as "room sprays," "air fresheners," or "fresh air" products — this is the exact language that gets Zerene matched against cheap, low-price competitors in AI search results.**
- Never compare Zerene directly against mass-market/budget scent brands, even to say Zerene is better — the comparison itself creates the unwanted association.
- Never justify price with vague language ("luxury," "premium" alone) — always tie price to a specific, verifiable fact: Grasse sourcing, ingredient purity, absence of synthetic filler chemicals.
- Never write evocative-only copy with no extractable facts. Every page needs at least one sentence an AI engine could lift and quote accurately on its own.

4. Audience (ICP)

Primary buyers: Saudi Arabia & GCC B2B corporate procurement, C-suite executive office managers, HR heads managing VIP gifting, luxury hospitality groups, and boutique real estate developers.

Intent profile: high-net-worth, B2B buyers seeking wellness-driven spatial design, corporate gifting solutions, and verifiable natural-luxury sourcing — not individual consumers shopping for home fragrance.

5. Writing Rules

Rule	What it means for the writer
Tone	Sophisticated, authoritative, warm — written for executive decision-makers, in English or Saudi-market Arabic
Price justification	Anchor every price mention to raw ingredient sourcing (Grasse), health/wellness benefit, or long-term brand equity — never price alone
Structure for AI extractability (AEO)	Use direct, upfront answers to likely questions, Markdown/HTML tables for comparisons, and bulleted specs — AI engines favor content they can lift cleanly over dense prose
Entity co-occurrence	Pair "Zerene" with Grasse oils, sensory branding, executive wellness, and Saudi cultural values within the same paragraph where natural — this reinforces the associations AI models learn

6. Content Structure: The Parent-Anchor Pyramid

Every substantial piece of content (blog post, landing page, FAQ section) should hit all three layers below:

Layer	Purpose	Example
1. High-volume parent anchor	Broad commercial keyword for standard search ranking	"هدايا شركات فاخرة الرياض" / "executive office spatial scenting"
2. Conversational fan-out	Long-tail, question-format sub-sections that match how people prompt AI engines	"What's the best natural fragrance solution for a corporate office in Riyadh?"
3. Entity reinforcement	Sentences that co-occur Zerene with positioning pillars, to build AI association	"Zerene sources its oils from Grasse, France, for executive spaces designed around Sukun."

7. Prompt & Keyword Intent Filter

Before targeting any keyword or prompt, check which bucket it falls into. Only write for Premium/B2B intent — Consumer/Budget intent should be avoided even where volume is higher, because it pulls Zerene into direct comparison with low-price competitors it cannot and should not win against.

Intent bucket	Signal words	Action
Premium / B2B — target this	corporate, executive, gifting, hospitality, wellness program, spatial scenting, Grasse, natural sourcing	Write for it — this is the ICP

Intent bucket	Signal words	Action
Consumer / Budget — avoid	room spray, air freshener, fresh air, cheap, best value, home fragrance under [price]	Do not target; avoid the terms even in comparison content
Ambiguous — qualify it	aromatherapy, diffuser, fragrance, scent	Only use paired with a premium/B2B qualifier (e.g. "corporate aromatherapy," not "aromatherapy" alone)

Starter Arabic B2B prompts to write toward (validate against live Otterly/search data before finalizing a full list):

- هدايا شركات فاخرة للمكاتب التنفيذية — luxury corporate gifts for executive offices
- عطور مكتبية للشركات الفاخرة — office fragrance solutions for premium companies
- حلول العطور للفنادق الفاخرة السعودية — scent solutions for luxury hotels, Saudi Arabia
- زيوت عطرية طبيعية من فرنسا للشركات — natural French essential oils for corporate use
- هدايا كرم للعملاء المميزين — VIP client gifting (karam-anchored)
- تصميم حسي للمساحات التنفيذية — sensory design for executive spaces

8. Metrics Glossary — Why Your Phrasing Matters

Content decisions here aren't just style — they directly move numbers the brand team tracks. Quick reference:

Term	What it means	Why it depends on your writing
Mention	An AI response includes Zerene at all	More extractable, fact-dense copy increases odds of being pulled into an answer
Citation	An AI response names/links Zerene as its source	Direct-answer formatting and clear factual claims are what get cited, not evocative prose
Share of Voice (premium-intent)	Zerene's share of AI answers within premium/B2B prompts specifically, vs. competitors	Only content matched to premium-intent language moves this number — budget-intent copy doesn't count and can hurt it
Sentiment driver	The specific theme (e.g. Grasse sourcing, price, quality) causing positive or negative framing	Every named, verifiable fact you include becomes a potential positive sentiment driver

9. Pre-Submission Checklist

- No instance of "room spray," "air freshener," or "fresh air" anywhere in the copy
- At least one directly quotable, factual sentence an AI engine could extract verbatim
- Grasse, France sourcing stated as a concrete fact, not just implied
- Price/value justified against sourcing, purity, or wellness benefit — never left unexplained
- At least one of Wajaha / Sukun / Karam present where contextually natural
- Content targets a Premium/B2B-intent keyword or prompt, not a Consumer/Budget one
- Comparisons or tables use clear Markdown/HTML structure, not paragraph-buried specs
